Which comes first, Armor Si or CALiMAGic?

- When using both Armor Si and CALiMAGic, add Armor Si to the reservoir first.
- When using Armor Si and/or CALiMAGic, with Flora Series, these products should be added prior to adding FloraMicro.

### Recirculating Nutrient Solution Tips:
- Keep nutrient solution temperature below 75°F (24°C).
- Change nutrient solution every 7-10 days and top off with fresh water between nutrient changes.
- Keep nutrient solution aerated.
- For best results maintain nutrient solution pH between 5.5 - 6.5.

### Troubleshooting factors to consider:
- And, bright, hot environments cause plants to drink more than if they are grown where it's humid, dim, and cool. Thus gardeners should use less concentrated nutrient solutions when growing conditions are more intense in order to lessen the risk of overfeeding.
- The pH (acidity or alkalinity) of a nutrient solution affects the availability of the elements contained within. Use GH pH adjusters to maintain nutrient pH between 5.5 - 6.5.

#### Base Nutrient

- **FloraNova Grow** 2.5 ml
- **FloraNova Bloom** 2.5 ml

#### Roots

- **RapidStart** 2.5 ml

#### Weight

- **Liquid KoolBloom** 2.5 ml

#### Aroma

- **Floralicious Plus** 2.5 ml

#### Flush

- **FloraKleen** 2.5 ml

#### Defense

- **Armor Si** 2.5 ml

#### Weight

- **Diamond Nectar** 2.5 ml

#### Vigor

- **CALiMAGic** 2.5 ml

#### Aroma

- **FloraBlend** 2.5 ml

#### Flavor

- **FloraNectar** 2.5 ml

#### Ripening

- **Dry KoolBloom** 2.5 ml
